

CURRICULUM VITAE

Stef Vanremoortele

Birth 19/02/1991

Nationality Belgian

E-mail stefvanremoortele@gmail.com

Software Engineer | Security Specialist | AI Agentic Orchestrator

Available in Belgium for freelance opportunities

Motion

My educational background in IT security, combined with strong analytical and conceptual thinking, and a genuine passion for understanding how technologies work, their strengths and their bottlenecks, will enable me to approach challenges with both technical depth and a strong security perspective.

Collaboration across teams and the ability to turn complex technical or security challenges into practical solutions are central to my way of working. A structured, quality-driven approach, combined with independence and strong contribution in Agile team environments, allows me to deliver effectively.

Eager to keep learning, adapt quickly to new technologies and methodologies, and take ownership with a pragmatic “make it happen” attitude, I am confident in delivering reliable solutions and making a valuable contribution.

EXPERIENCE

Jan 2026 until Mar 2026

IT Solutions Architect @ **SIMIT**

- Integrated AI-driven coding tools and LLM workflows into the development lifecycle
- Accelerated development speed and improved code quality through modern tooling adoption

Reference: Jeffrey Drooghenbroodt (CEO)

Jul 2023 until Jan 2026

IT Security & Compliance Engineer @ **Roularta Media Group**

- Improved general security posture across a large-scale media and industrial environment by establishing security policies and campaigns (clean desk, password hygiene, phishing)
- Led application security initiatives by implementation of SSDLC, including code analysis (SAST/DAST, OWASP, Intigriti), penetration testing, threat modeling, and vulnerability & risk management (CVSS, ASVS)
- Implemented identity & access management solutions (Azure Entra, OAuth, OpenID, SAML, Palo Alto Strata/Prisma/Cortex)
- Integrated SIEM solutions and collaborated on incident response with SOC teams (Microsoft Sentinel, EASM, XDR, threat detection/monitoring/hunting)
- Migration of legacy infrastructure to a zero-trust cloud-based authentication system (ZTNA)
- Contributed to compliance with NIST, ISO 27001/27002/27017/27701, GDPR, and NIS2 frameworks

Reference: Oliver Martin (IT Security Manager)

Nov 2022 until Jul 2023

Software Engineer @ **Zora Robotics**

- Built and maintained a multi-tenant backend platform using a gRPC microservices architecture
- Designed scalable and fault-tolerant systems with distributed services and replicated databases
- Implemented asynchronous communication using Kafka and HTTP APIs
- Applied Test-Driven Development practices with advanced mocking and stubbing techniques
- Collaborated in Agile teams delivering incremental improvements

Reference: Wim Vanneste (CIO)

Jul 2021 until Sep 2022	Software Engineer @ NineID
• Developed identity and access management systems using facial recognition technology • Built backend services and client-facing interfaces for secure authentication systems • Prototyped innovative solutions including BLE communication and AI-based integrations • Worked extensively with embedded Linux systems <i>Reference: Frederik Keyzers (CEO)</i>	
Nov 2020 until Jul 2021	Software Engineer @ Noordzee Helikopters Vlaanderen
• Developed a cross-platform web application for a globally distributed aviation company • Delivered scalable solutions supporting multiple international locations • Implemented interactive learning for end-users using SCORM and xAPI. • Implemented verification checks regarding flight rules and mandatory training <i>Reference: Frederik Keyzers (Teamlead)</i>	
Nov 2018 until Sep 2020	Software Engineer @ Easypost
• Built internal platforms using Python and Angular to streamline business processes • Developed multi-threaded client-server applications for hardware integration • Managed infrastructure including Active Directory, VPN, backups, and networking • Led development efforts independently and mentored new team members • Performed large-scale database operations and optimization <i>Reference: Bart Despontin (CIO)</i>
