

CURRICULUM VITAE

Stef Vanremoortele

8400, OOSTENDE

☎ (+32) 474 019 394

✉ stefvanremoortele@gmail.com

Date of birth 19/02/1991

Nationality Belgian

Software Developer & Security Specialist

7 years of professional experience

Strong technical background

Available in Flanders (Belgium)

MOTIVATION

Most of my experience lies in developing web applications, with a primary focus on back-end development and infrastructure. Over time, I have cultivated a deep enthusiasm for client-side development and interface design, particularly the psychology behind intuitive design, cognitive ease, and user experience as a whole.

I am passionate about building products and creating new features, with a strong dedication to design patterns, clean code principles, and development workflow optimization. I continually reflect on how to streamline processes such as collaboration, documentation, testing, building, and deployment, striving for an ideal development environment. My technical expertise spans a very wide range of frameworks and libraries gained through extensive hands-on experience and continuous learning.

My education in cybersecurity has provided me with a strong foundation to design and deliver secure, reliable software systems. Through both education and practical experience, I have developed a solid understanding of the challenges involved in protecting digital assets and ensuring system resilience. This knowledge complements my expertise in secure software development, where I embed security principles throughout the entire development lifecycle.

As I'm advancing into a more senior role in my career, I am seeking an environment where I can leverage my technical expertise and hands-on experience to lead software teams and projects. I am eager to contribute to meaningful initiatives while fostering a culture of collaboration, innovation, and excellence.

EXPERIENCE

Jan 2026 until **Mar 2026**

IT Solutions Architect @ **SIMIT**

Provided high-level technical support and architectural oversight for active software projects, ensuring system stability, performance optimization, and alignment with business requirements. Spearheaded the integration of AI-driven coding tools and LLM workflows into the development lifecycle to accelerate delivery, improve code quality, and modernize the internal engineering environment.

Reference: Jeffrey Drooghenbroodt (CEO)

Jul 2023 until **Jan 2026**

IT Security & Compliance Engineer @ **Roularta Media Group**

Security posture improvements for a company of considerable size, concerned with media and advertising, including an OT environment for the printing of magazines.

Mainly focused on application security and user-related security campaigns (password policy, awareness), but also time invested in conditional access, identity & access management, and adherence to NIST/GDPR/NIS2/ISO 27001,27005,2703.

Restructuring and clean-up of legacy domain (on-prem AD, insecure protocols, certificate management, patching), providing the integration with cloud services in a Azure/Entra cloud environment with modern authentication (OAuth, OpenID, SAML).

Inhabited with threat detection (STRIDE, threat modeling, code analysis, penetration testing), risk assessment (CVSS, EPSS) and vulnerability management, taking into account the CIA principles of information security.

Served the integration of SIEM on company infrastructure and performed incident response with SOC partner when required (Sentinel/Defender Advanced Hunting).

Reference: Oliver Martin (IT Security Manager)

Nov 2022 until **Jul 2023**

Software Engineer @ **Zora Robotics**

Developed and maintained the back-end of a multi-tenant platform in a gRPC microservices architecture for a company delivering IoT applications.

Contributed to the design and optimization of a scalable system, incorporating multiple instances and replicated databases to support robust and fault-tolerant operations.

Responsibilities included implementing complex business logic and ensuring seamless communication between clients using both HTTP and Message Queues (Kafka).

Focused on adhering to best practices in Test-Driven Development, employing advanced stubbing and mocking techniques to ensure high-quality and maintainable code.

Operated in an Agile environment with a commitment to delivering incremental improvements and collaborating effectively within cross-functional teams.

Reference: Wim Vanneste (CIO)

Jul 2021 until **Sep 2022**

Software Engineer @ **NineID**

Contributed to the development of a physical identity and access management system for a Start-Up, leveraging facial recognition technology powered by Intel RealSense Depth and Tracking cameras. Engaged in both back-end development and the creation of management and client-facing interfaces.

Developed proof-of-concept solutions for innovative technologies, including AI mesh programming, Bluetooth Low Energy communication, and SCORM-based e-learning modules. Worked extensively in a bare Linux environment on Raspberry Pi devices, ensuring lightweight and efficient operations tailored to embedded systems.

Highlight: Start-up experience

Reference: Frederik Keyzers (CEO)

Nov 2020 until **Jul 2021**

Software Engineer @ **Noordzee Helikopters Vlaanderen**

Developed a cross-platform web application serving as an interface for the management team and pilots of an international aviation company, addressing the needs of a globally distributed environment with multiple bases and offices worldwide.

Focused on delivering a seamless user experience and ensuring compatibility across diverse platforms to accommodate the unique operational demands of the aviation industry.

Reference: Frederik Keyzers (Teamlead)

Nov 2018 until **Sep 2020**

Software Engineer @ **Easypost**

For a mail order company, maintained and enhanced an existing customer interface for mail tracking, implemented in PHP. Designed and developed custom multi-threaded client-server applications to automate and batch-process data coming from hand scanners, leveraging Python with Tkinter and PyQt for graphical interfaces.

Created an internal web platform to integrate company departments and streamline business process management, featured with a Python/Django back-end and an Angular front-end.

Managed the company's network infrastructure, including Active Directory (Microsoft), network firewalls (pfSense), VPN (OpenVPN), backups (Veeam), and NAS storage (Synology). Facilitated the integration of specialized hardware, such as Pitney Bowes franking machines and Zebra printers,.

Independently led application development efforts before scaling the team, where I was assumed a mentorship role, training new team members on project technologies and architecture.

Adapted to an environment lacking structured development methodologies (e.g., SDLC), gaining valuable insights into the critical importance of such practices.

Executed large-scale database operations with MS SQL, routinely handling extensive record sets and leveraging SSMS for database management and optimization.

[missing: 70/30, Migration to new site, OCR]

Highlight: Migration to new office
